Fundamentals of Planetary Science II Course Syllabus – AST 502

Department/Academic Unit: Astronomy and Planetary Science

Term/Year: Spring, 2022

Total Units of Course Credit: 3 **Mode of Instruction**: face-to-face

General Information:

Class Times: M/W/F 11:30 am – 12:20 pm

• Location: Physical Sciences (Bldg #19) Room 111

• Instructors: Profs. Devon Burr and Josh Emery

o Email: <u>Devon.Burr@nau.edu</u> and <u>Joshua.Emery@nau.edu</u>

Offices: Physical Sciences 315 and 323/324

o Office Hours: Monday 2-3 pm and by appointment

"Welcome to Fundamentals of Planetary Science II"

We're looking forward to this class with all of you.

Course Purpose:

Geophysical and geologic processes occur throughout our Solar System. Thus, an understanding of these processes is a necessary foundation to understanding its past evolution, current state, and habitability potential. This course, following on AST501 Fundamentals of Planetary Science I, serves the PhD program in Astronomy and Planetary Science with the aim of continued development of students as research professionals. Our ambition for each student in the course is: i) the development of a foundational understanding of planetary geophysical and geologic processes, ii) the continued practice of technical (e.g., computational) skills used in planetary science, and iii) an enhanced capacity in reading, understanding and presenting scientific literature, including a knowledge of the scientific methodology of hypothesis testing. These desiderata will be shaped through engagement with the course materials, including by independent work and in collaboration with other students.

Prerequisites: This course is a graduate-level course for students pursuing a PhD in astronomy and planetary science or a related field. A working knowledge of undergraduate physics and advanced mathematics (e.g., calculus) is expected, along with a familiarity with geologic and geophysical concepts. We're happy to suggest background reading materials if needed.

Course Student Learning Outcomes:

This course subserves the departmental Student Learning Outcome "Understand the physical processes in the present-day Solar System through high-level problem solving . . ." For students whose research focuses on the study of planetary surfaces, it subserves the further learning outcomes "understand the principles of...planetary system formation...[and] the

physical processes in the present day Solar System..." (https://catalog.nau.edu/Catalog/details?plan=ASTPHD&catalogYear=2122)

Assignments/Assessments of Course Student Learning Outcomes: The following assignments will be used to assess student achievement of the course Student Learning Outcomes:

1) Homework

- There will be seven homework assignments, intended to develop your skill and thus comfort with the material presented in class. The ~bi-weekly cadence of these assignments is designed to provide sufficient time for their thoughtful completion, including assimilation of material both presented in class and collected by you out of class. The distribution of points per question will be indicated on each assignment.
- Homework assignments will be built around calculations. State any assumptions and show neatly, with explanation when necessary, all steps in your work. This practice will both support your correct, logical reasoning and provide experience in explaining your work to others, as is necessary in teaching, scientific collaborations, manuscripts, meeting presentations, etc.
- Homework assignments might also include writing, a fundamental skill of a scientist in communicating their work. When a written response is required, use complete sentences, correct grammar, correct spelling, and other components of standard scientific English.
- Collaboration is a hallmark of modern science. Please feel free to work together. At the same time, the submitted work must be the result of your own efforts. <u>Indicate on the submitted work any individuals with whom you collaborated, whether receiving and/or providing help, and briefly for each individual the nature of that collaboration</u>. If you did not receive or give any help, state that fact as well. Some journals (e.g., Science, Nature) require such statements on submitted manuscripts, so this requirement will help prepare you for submitting manuscripts to such journals.

2) Presentation of one student-selected article

- You will each select and present to the class one article from the peer-reviewed scientific literature. The purpose of this assignment is to develop your skill in reading the scientific literature and in giving oral presentations. We will devote some time in the first weeks of class to discussing effective approaches for giving oral presentations.
- These articles must be related to the course topics covered during the two preceding weeks of class. So that we can post the articles at least one week before their presentation, please share with us the article you'd like to present not later than 10 days before they are scheduled to be presented. Journals such as Science, Nature, Nature Astronomy, Nature Geosciences, Geophysical Research Letters, Geology, and PNAS are fertile sources for appropriate and topical articles. Shorter topical articles from other journals are also appropriate.
- Presentations will be evaluated on the basis of a pre-defined rubric (available on the course Bblearn site under *Article Presentation Materials*).
- Students not presenting will provide constructive feedback to the presenter using this same evaluation form available on the Bblearn site. In addition to providing feedback to the presenter, a second purpose for this assignment is to promote thoughtful

engagement among the listeners. After each presentation, everyone will have ~5 minutes to complete the forms. We will collect these forms and provide them to the presenter along with our own evaluation. The grade will be based on our evaluation only, and any forms that contain any feedback that is non-constructive will not be passed to the presenter. These evaluations of fellow students are expected but not graded.

3) Write-ups of student-selected articles

- All students except the one presenting the article will before the presentation provide
 a write-up of the article. The purpose of this assignment is to further develop the
 fundamental skill of reading the scientific literature with understanding and thereby to
 support your writing of understandable scientific literature.
- Student-selected articles will be made available at least one week before they are scheduled to be presented, and a write-ups of each article is due on the day it is scheduled to be presented.
- This write-up should be 1-2 pages in length and, in addition to the bibliographic information for the article, include five parts:
 - i) Background and motivation why was this article written? What is the knowledge gap that the hypothesis addresses? How was the hypothesis motivated by previous work?
 - ii) Hypothesis to be tested was it explicit or implicit in the article?
 - iii) Methods Provide a brief statement of the methods used
 - iv) The outcome of the hypothesis testing do the results support the ingoing hypothesis or not? Describe the logical reasoning used to assess the results in the context of the hypothesis.
 - v) Something significant that you learned from the article and why this new knowledge is significant in the context of either the article topic or of our course material
 - vi) Something you didn't understand and where the confusion arose <u>or</u> something you weren't convinced by in the article and one or more ideas to further investigate it.

Examples are provided on the course Bblearn site under Article Presentation Materials.

- Each of these six components will be worth 15% with the remaining 10% based on quality of the writing.
- Please sign up for a presentation topic and date by Friday, Jan 21. The sign up link is: https://docs.google.com/spreadsheets/d/1lv9yMzykvilo B5A3f3V26p-OsaO-3vexiAXU34ebo/edit?usp=sharing
- 4) In-person meeting with Instructors: Students are requested to have at least one in-person meeting with the instructors to support intercommunication, e.g., for the instructors to provide qualitative feedback on student achievements in the class, to hear from each student any means by which we could better support their knowledge achievement, and provide an opportunity to discuss any class-related issues that the student cares to share. Each student bears the responsibility for scheduling this meeting, and we ask that it occur between the return of the first graded assignment and the end of in February. Grades will be based on the student showing up for the meeting as scheduled and thoughtfully engaging in the discussion.
- 5) **Final Exam**: A final exam will take place <u>Wednesday, May 4, from 10 am to noon</u> in our classroom. The exam will be based on the homework assignments, which might well have been completed in collaboration with classmates and for which the students will have

received graded feedback. Thus, this exam provides the opportunity for each student to independently demonstrate assimilation and understanding of the course materials. The distribution of points will be indicated on each question.

Textbooks: This course does not require any textbook purchases. Useful references include:

- 1) Melosh, <u>Planetary Surface Processes</u>
- 2) Turcotte and Schubert, Geodynamics
- 3) Lissauer & de Pater, Planetary Science
- 4) Stacy and Davis, The Physics of the Earth
- 5) Anderson and Anderson, <u>Geomorphology: the mechanics and chemistry of landscapes</u>

Grading: Overall course grades will be determined using the following weights:

•	Homework	60%	[lowest grade will be dropped]
•	Article Presentation	10%	
•	Article Write-ups	15%	[lowest grade will be dropped]
•	In-person Meeting	5%	
•	Final Fyam	10%	

Final letter grades will be assigned according to:

$$A = 90 - 100$$
. $B = 80 - 89$. $C = 70 - 79$. $D = 60 - 69$. $F = 0 - 59$.

Course Topics Outline: any needed adjustments will be promulgated by email and in class. No adjustments will move up (make earlier) the due date for any assignment.

WEEK	~ DATES	LIKELY TOPICS
1	Jan 10,12, 14 Overview of the SS Review of the syllabus Shape of Solar System bodies	Overview of the SS
		Review of the syllabus
		Shape of Solar System bodies
		[LPSC abstracts due Jan 11. AAS Jan 9-13]
2	Jan 19,21	Gravity
		Current SS dynamics
		[Sign-ups for presentation topic and date due by Jan 21]
3	Jan 24,26,28	Orbital dynamics, Sources of comets and NEOs
		Asteroids
		[SBAG, Jan 24]
		HW 1 due: Wed, Jan 26
4	4 Jan31, Feb2,4	Asteroids
		Meteorites

		Regolith on airless bodies
		HW 2 due: Wed, Feb 9
6	Feb 14,16,18	Regolith on airless bodies
		Space Weathering
7	Feb 21,23,25	Interior structures: heating, differentiation and convection

Deformation, topographic support Tectonism: Types of faults, fault morphologies on terrestrial and icy bodies and implications HW 3 due: Wed, Feb 23
bodies and implications HW 3 due: Wed, Feb 23
HW 3 due: Wed, Feb 23
HW 3 due: Wed, Feb 23
In norsan macting with instructors by and of Fabruary
In-person meeting with instructors by end of February
8 Feb28,Mar2,4 Volcanism:
Observations and theory for silicate volcanism and cryovolcanism.
9 Mar 7,9,11 [LPSC / IEEE Aerospace Conference] NO CLASS
HW 4 due: Wed, Mar 9
Mar 14,16,18 SPRING BREAK
10 Mar 21,23,25 Slopes processes: mass movement, sublimation induced landforms
11 Mar28,30,Apr1 Aeolian processes and landscapes: mechanics and morphologies
HW 5 due: Wed, Mar 30
12 Apr 4,6,8 Fluvial processes and landscapes: mechanics and morphologies
13 Apr 11,13,15 Ice: inner and outer Solar System
HW 6 due: Wed, Apr 13
14 Apr 18,20,22 Rings, Kuiper Belt Objects
15 Apr 25,27,29 Make-up week and/or topics TBD with student input
HW 7 due: Wed, Apr 27

Article write-ups are due before the start of class on the day each article is presented.

Course Policies:

- As noted above, collaboration is a fundamental aspect of science and is encouraged on homework assignments, with appropriate credit. Conversely, plagiarism —" to steal and pass off (the ideas or words of another) as one's own: use (another's production) without crediting the source" (https://www.merriam-webster.com/dictionary/plagiarize) is a fundamental breach of the principles of research and professional ethics. Evidence for plagiarism will be discussed with the student(s) involve. If substantiated, plagiarism will result in a failing grade for the assignment and, potentially, referral to the University. See https://www5.nau.edu/policies/client/Details/860?wholsLooking=Students&pertainsTo=All for NAU's policies on academic integrity.
- Homework and Article Write-ups are due by 11:30am that is, before the start of class -on their respective due dates. Homework is due in hard copy with pages stapled together.
 Article Write-ups are due electronically either posted on Bblearn or (if you run into
 problems posting) by email addressed to both of us.
- Each student may turn in one assignment of each type one Homework and one Article
 Write-up up to one week late without penalty for this lateness. No reason or prior
 notification is needed. Any subsequent late assignment(s) would not receive any credit,
 although we will grade such assignments to provide feedback on the work to facilitate
 studying for the final exam.
- If you must be unexpectedly absent on the day that you are scheduled to present your article, please let us know as soon as you are able. As our class that day will somewhat

- structured around your presentation, we ask you to make all reasonable efforts to fulfill this responsibility.
- Final Exam If you cannot attend the final exam, please let us know as soon as possible. If you miss the exam without this prior notification, you will be able to make it up only under exceptional circumstances.

Standards of Conduct and Attendance: We ask everyone to practice civility, including a genuine respect and valuing of others. Please attend every class possible – *because research shows that in-person attendance and activities enhance learning* – and be fully present in class to support group learning as well as to maximize your own benefit from the course.

It's imperative of course that we look out for our group health and safety.

If according to CDC guidelines and NAU policy, it would be unsafe for others for you to attend a given class, please let us know and we will be glad to provide a one-time link for your remote attendance.

If you feel that the behavior of any class member – professor or student – is discriminatory, harassing, or otherwise impedes learning, please refer to the resources on the following pages for help in addressing this behavior.

Feedback: Feedback on this course is welcome, either something you like about the course and / or something we could do to enhance your learning. We'd be glad to receive information: (1) during the in-person meeting, (2) speaking to one or both of us at some other time, and/or (3) sending one or both of us an email. Any feedback you provide, no matter how praiseworthy or critical, will not affect your grade in any way. Except for during the in-person meeting, you're always free to join together with other students in the class in communicating with us

Students are always encouraged to avail themselves of procedures laid out in the departmental graduate student handbook.

SYLLABUS

REQUIREMENTS

COVID-19 REQUIREMENTS AND INFORMATION

Additional information about the University's response to COVID-19 is available from the **Jacks are Back!** web page located at https://nau.edu/jacks-are-back.

SYLLABUS POLICY STATEMENTS

ACADEMIC INTEGRITY

NAU expects every student to firmly adhere to a strong ethical code of academic integrity in all their scholarly pursuits. The primary attributes of academic integrity are honesty, trustworthiness, fairness, and responsibility. As a student, you are expected to submit original work while giving proper credit to other people's ideas or contributions. Acting with academic integrity means completing your assignments independently while truthfully acknowledging all sources of information, or collaboration with others when appropriate. When you submit your work, you are implicitly declaring that the work is your own. Academic integrity is expected not only during formal coursework, but in all your relationships or interactions that are connected to the educational enterprise. All forms of academic deceit such as plagiarism, cheating, collusion, falsification or fabrication of results or records, permitting your work to be submitted by another, or inappropriately recycling your own work from one class to another, constitute academic misconduct that may result in serious disciplinary consequences. All students and faculty members are responsible for reporting suspected instances of academic misconduct. All students are encouraged to complete NAU's online academic integrity workshop available in the E-Learning Center and should review the full *Academic Integrity* policy available at https://policy.nau.edu/policy/policy.aspx?num=100601.

COURSE TIME COMMITMENT

Pursuant to Arizona Board of Regents guidance (ABOR Policy 2-224, *Academic Credit*), each unit of credit requires a minimum of 45 hours of work by students, including but not limited to, class time, preparation, homework, and studying. For example, for a 3-credit course a student should expect to work at least 8.5 hours each week in a 16-week session and a minimum of 33 hours per week for a 3-credit course in a 4-week session.

DISRUPTIVE BEHAVIOR

Membership in NAU's academic community entails a special obligation to maintain class environments that are conductive to learning, whether instruction is taking place in the classroom, a laboratory or clinical setting, during course-related fieldwork, or online. Students have the obligation to engage in the educational process in a manner that does not interfere with normal class activities or violate the rights of others. Instructors have the authority and responsibility to address disruptive behavior that interferes with student learning, which can include the involuntary withdrawal of a student from a course with a grade of "W". For additional information, see NAU's *Disruptive Behavior in an Instructional Setting* policy at https://nau.edu/university-policy-library/disruptive-behavior.

NONDISCRIMINATION AND ANTI-HARASSMENT

NAU prohibits discrimination and harassment based on sex, gender, gender identity, race, color, age, national origin, religion, sexual orientation, disability, or veteran status. Due to potentially unethical consequences, certain consensual amorous or sexual relationships between faculty and students are also prohibited as set forth in the *Consensual Romantic and Sexual Relationships* policy. The Equity and Access Office (EAO) responds to complaints regarding discrimination and harassment that fall under NAU's

Nondiscrimination and Anti-Harassment policy. EAO also assists with religious accommodations. For additional information about nondiscrimination or anti-harassment or to file a complaint, contact EAO located in Old Main (building 10), Room 113, PO Box 4083, Flagstaff, AZ 86011, or by phone at 928-523-3312 (TTY: 928-523-1006), fax at 928-523-9977, email at equity-and-access equity-and-access.

TITLE IX

Title IX is the primary federal law that prohibits discrimination on the basis of sex or gender in educational programs or activities. Sex discrimination for this purpose includes sexual harassment, sexual assault or relationship violence, and stalking (including cyber-stalking). Title IX requires that universities appoint a "Title IX Coordinator" to monitor the institution's compliance with this important civil rights law. NAU's Title IX Coordinator is Elyce C. Morris. The Title IX Coordinator is available to meet with any student to discuss any Title IX issue or concern. You may contact the Title IX Coordinator by phone at 928-523-3515, by fax at 928-523-0640, or by email at elyce.morris@nau.edu. In furtherance of its Title IX obligations, NAU will promptly investigate and equitably resolve all reports of sex or gender-based discrimination, harassment, or sexual misconduct and will eliminate any hostile environment as defined by law. Additional important information about Title IX and related student resources, including how to request immediate help or confidential support following an act of sexual violence, is available at https://in.nau.edu/title-ix.

ACCESSIBILITY

Professional disability specialists are available at Disability Resources to facilitate a range of academic support services and accommodations for students with disabilities. If you have a documented disability, you can request assistance by contacting Disability Resources at 928-523-8773 (voice), 928-523-6906 (TTY), 928-523-8747 (fax), or <a href="mailto:dreamil

RESPONSIBLE CONDUCT OF RESEARCH

Students who engage in research at NAU must receive appropriate Responsible Conduct of Research (RCR) training. This instruction is designed to help ensure proper awareness and application of well-established professional norms and ethical principles related to the performance of all scientific research activities. More information regarding RCR training is available at https://nau.edu/research/compliance/research-integrity.

MISCONDUCT IN RESEARCH

As noted, NAU expects every student to firmly adhere to a strong code of academic integrity in all their scholarly pursuits. This includes avoiding fabrication, falsification, or plagiarism when conducting research or reporting research results. Engaging in research misconduct may result in serious disciplinary consequences. Students must also report any suspected or actual instances of research misconduct of which they become aware. Allegations of research misconduct should be reported to your instructor or the University's Research Integrity Officer, Dr. David Faguy, who can be reached at david.faguy@nau.edu or 928-523-6117. More information about misconduct in research is available at https://nau.edu/university-policy-library/misconduct-in-research.

SENSITIVE COURSE MATERIALS

University education aims to expand student understanding and awareness. Thus, it necessarily involves engagement with a wide range of information, ideas, and creative representations. In their college studies, students can expect to encounter and to critically appraise materials that may differ from and perhaps challenge familiar understandings, ideas, and beliefs. Students are encouraged to discuss these matters with faculty. Last revised August 1, 2021
